How a chat answer becomes a note in SumizAI

The pipeline, step by step: the answer streams in, a draft is generated, a chapter is chosen, duplicates are checked, and a Markdown file is written.

Links between notes and backlinks in SumizAI

Links live in the note text as ordinary Markdown links to real files. The model may only point at filenames it was given, and each note lists what points back.

SumizAI for developers: decisions that survive

SumizAI for students and researchers: how to use it

Vaults per subject, questions that produce revisable notes, a table of contents that becomes a syllabus, and a PDF you generate instead of a night you lose.

SumizAI vs Notion, Obsidian and a chat window

An honest comparison: what each tool is actually for, where SumizAI overlaps, where it does not compete at all, and when you should use two of them together.

What is a vault in SumizAI, and why it matters

A vault is not a folder with a nicer name. It is the edge of what the model can see, the owner of your table of contents, and the unit you export.

SumizAI pricing: 7 days free, then \$1 a month

Seven days free with no card, then one dollar a month for a single plan. You bring your own AI key, and an unpaid account can still read and export its notes.

Where SumizAI stores your notes, and in what format

Plain .md files in a folder you choose, one directory per vault, base.md for the index and notes/ for the notes. The database is only an index.

Which AI models and providers SumizAI works with

Anthropic, OpenAI, Gemini, Groq, OpenRouter, a local Ollama or your own server — always with your own API key, and the model list fetched from the provider.

Why SumizAI is different from other note editors

A note editor gives you an empty page. SumizAI writes the note, files it in a chapter, checks it against what you already wrote, and saves a plain .md file.

How these files are made

A headless browser opens the live page and prints it with the site's own print stylesheet: navigation, the language picker and the cookie bar drop out, the dark palette turns to ink on paper, and every page carries its own address in the footer so a printed copy can always be traced back to the original.
